

"My name is Shakil Rana, and I recently completed my Bachelor's in Computer Science from Daffodil International University. I'm passionate about artificial intelligence, and over the past few years, I've built hands-on experience in machine learning, deep learning, natural language processing, and computer vision.

I've completed an internship where I worked on real-world ML projects, and I'm currently working as a Machine Learning Engineer at KodeEnd IT Solutions. I've also contributed to several research papers and built projects like sentiment analysis pipelines using NLTK, Word2Vec, and BERT, as well as object detection systems with YOLOv8.

Right now, I'm now looking for an opportunity where I can apply these skills, learn from experienced professionals, and contribute to real-world projects, especially in AI or data science domains."
